Themes

- 1 From sediments and water to top predators: how to use these elements in assessing environmental quality?
- 2 Ecological risk assessment in marine and estuarine ecosystems: how to integrate physicochemical, ecological and ecotoxicological methods?
- 3 Robustness of ecological indicators in detecting anthropogenic pressures: Can they cope with natural changes?
- 4 How comparable are ecological assessment criteria and approaches worldwide?
- 5 Integrate to evaluate and manage: How to do it?
- 6 WISER special session
